

F/S on Project Development for the Introduction of Smart Community Technologies in Housing and Urban Development in Banten Province, Indonesia

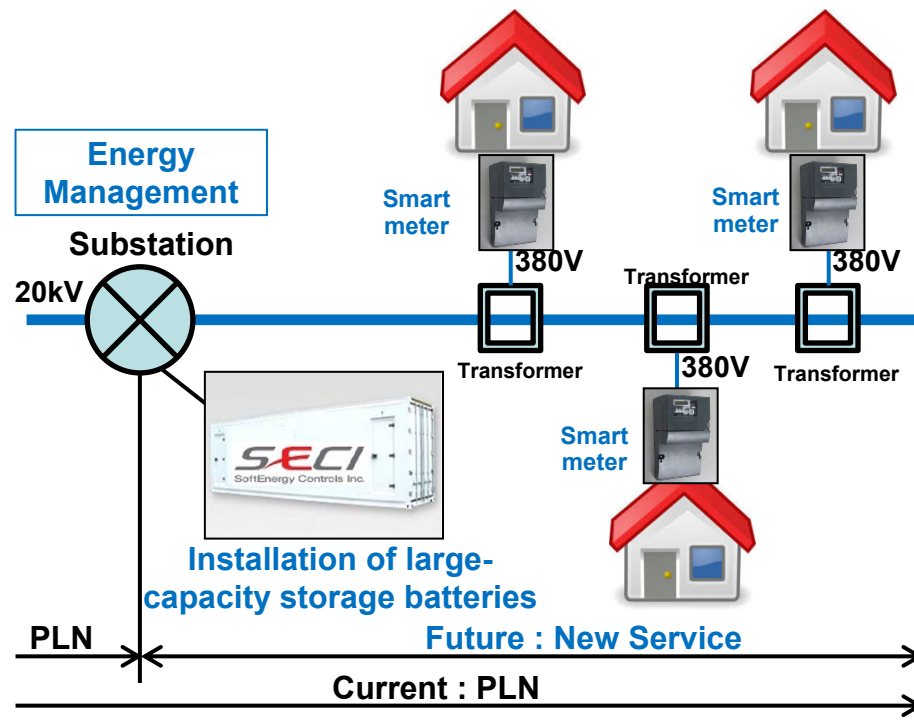

Fuji Electric, CTI Engineering, Daiwa House, Sumitomo Electric Industries

METI: Project on promoting the expansion of infrastructure and systems to ease supply and demand of energy
(Project F/S on smart communities in the global market) (July 2014~) 50

【Project Objective】

F/S on energy management projects as a potential promotional model for urban development in relation to housing in Indonesia, and the development of business plans for companies providing energy management services.

- Companies providing energy management services for housing will receive power from the state-run power company, PLN. These companies will resell electricity with enhanced efficiency.
- To promote enhanced efficiency of the use of energy through the implementation of energy management over the mid- to long-term, companies plan to introduce community storage batteries and the use of natural and renewable energy.

【Project Implementation System】
