

Improvement of Solid Waste Management in Fraser's Hill, Malaysia

Hibikinada Development, The Merry Corporation, Kitakyushu City Environmental Preservation Association

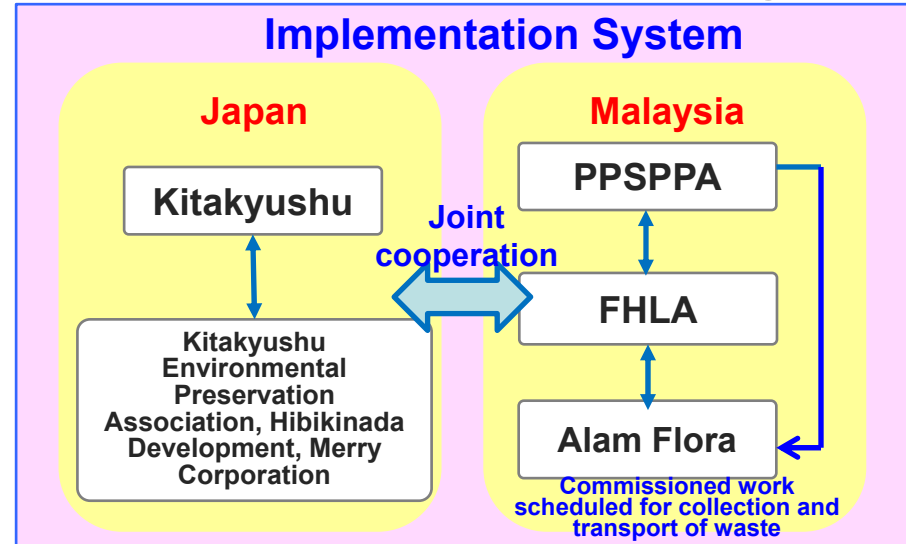

Grassroots Technical Cooperation Project (Special category of local economy revitalization) (2014~) (52)

Fraser's Hill is a typical tourist spot in Malaysia. However, immediate measures are needed to respond to pressure on the remaining capacity of the final disposal site and groundwater contamination.

The Solid Waste Management and Public Cleansing Corporation (PPSPPA) of Malaysia supports the improvement of waste management and capacity by providing guidance to the Fraser's Hill Local Authority (FHLA).

【Activities】

- Separation and collection of recyclables and development of a recycling system
- Separation and collection of organic waste from businesses and development of a composting system
- Surveys on the current state of environmental pollution at the former disposal site, development of pollution prevention guidelines, and recommendations for measures to extend the life of the current disposal site.

Flowchart of waste separation and recycling in Fraser's Hill
